ABOUT ME

Golden Visa holder Aerospace Engineer with 4 years of experience spanning spacecraft attitude control, nonlinear structural analysis, and the integration, test, and sustainment of flight-critical systems. Experienced in formal review gates and environmental test campaigns. Abu Dhabi based, immediately available.

RELEVANT WORK EXPERIENCE

CAE - Etihad Aviation Training

Abu Dhabi, UAE

FSTD Support Engineer

Oct 2024 - Present

- Maintain FFS, FTD, and IPT simulators across a fleet spanning A320 (CEO & NEO), A330, A350, A380, B777, B787, ERJ145, KA350, Phenom 100 & 300, Bell 412, and AW139 & 169, on CAE 7000XR, 3000 Series, and legacy Classic/R4 platforms.
- Diagnose and resolve complex faults across tightly coupled hardware and software subsystems including motion platforms (Moog/E2M), visuals, avionics, control loading, and host networks, restoring availability under AOG conditions against fixed training schedules.
- Run, evaluate, and validate Qualification Test Guide (QTG) campaigns, establishing objective evidence of compliance against EASA, GCAA, and FAA acceptance criteria.
- Interpret schematics and interface documentation (GPIO, IO cards, GPIM, MPICs) to isolate faults at harness and board level, and author maintenance procedures and configuration standards adopted fleet-wide.

UKSEDS (UK Students for the Exploration and Development of Space)

Remote, UK

Competitions Branch Director | Interim ORT Team Lead

May 22 - Dec 23

- Chaired PDR, CDR, and TRR review panels at Airbus Stevenage and RAL Space Harwell, formally evaluating integration and performance of flight hardware across CubeSat, rocket, and rover platforms.
- Delivered competition campaigns involving live vibration testing, TVAC, RF verification, and functional test execution, assessing hardware directly against acceptance criteria.
- Architected and delivered 5 national space engineering competitions end-to-end, securing £50,000+ in sponsorship and co-designing technical criteria with senior engineers at Airbus Space & Defence, BAE Systems, RAL Space, and Skyrora.

SPACE AND ENGINEERING PROJECTS

AsteriA CubeSat Programme, University of Edinburgh

Remote, UK

AOCS Engineer

Oct 20 - Jun 21

- Developed quaternion-based attitude determination and control algorithms in Python and MATLAB, modelling rigid-body attitude dynamics and disturbance torques to validate pointing performance.
- Evaluated actuator and sensor configurations against mission pointing requirements and verified controller stability in closed-loop simulation.

MEng Research: Nonlinear FEA of Compliant Flexure Mechanisms

Bristol, UK

Research Engineer

Sep 22 - Jun 23

- Characterised cross-spring and butterfly flexures under large deflection using nonlinear finite element analysis in Abaqus with MATLAB post-processing, quantifying stiffness and stress across the design space.
- Directly transferable to payload optomechanical mounts, isolation stages, and deployable satellite mechanisms.

Wildfire Prediction Algorithm

Bristol, UK

Machine Learning Engineer

Sep 21 - Aug 22

- Built a wildfire prediction model from satellite Earth observation data achieving a 0.705 F1 score (Random Forest), benchmarked against SVM, ANN, logistic regression, and decision trees.

Fixed-Wing UAV, Aerospace Vehicle Design and Systems Integration

Bristol, UK

MAC (Mechanics, Actuators, and Controls) Team Leader

Sep 20 - Aug 21

- Led development of autonomous and manual control algorithms, owning control surface design, actuator selection, and closed-loop controller implementation through to wind tunnel validation.

EDUCATION AND QUALIFICATIONS

University of Bristol, Aerospace Engineering MEng

Bristol, UK

Second Class Honours (First Division), equating to a 3.75 GPA

Sep 19 - Jun 23

AWARDS, SKILLS, AND EXTRA QUALIFICATIONS

AWARDS: [British Interplanetary Society \(BIS\) 2022-2023 Space Student of the Year](#)

IT SKILLS: Python, MATLAB, C/C++, Abaqus, Ansys, CAD (SolidWorks, Fusion 360, Inventor), LaTeX, Machine Learning

EXTRA QUALIFICATIONS: UAE Golden Visa, First-Aid Certified, BSAC Diver
